

2013 Nissan Leaf BEV Accelerated Testing - June 2015

Four model year 2013 Nissan Leaf battery electric vehicles (BEVs) entered Accelerated Testing - one during April 2013 and the other three during December 2013 in a fleet in Arizona. Each Leaf will be operated for 60,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby [www](#) pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2013 Nissan Leaf BEVs have been driven a total of 63,739 miles. The cumulative average electricity consumption is 279.1 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
